

INT443 WORK-IN SPACE

2020 AUTUMN

M.Sc., Hande Karakaş, ITU

Recent 20 years is the time-lapse of leading active fluctuations in economic and sociological activities influencing the potential of working life. The biggest breakthrough is the decreasing volume of technological tools and the enhancement of operating systems. While 'open office' is still on the agenda of spatially providing the mechanization of working cycle in physiologically well-conditioned spaces, on other side, new remote working forms emerge such as 'co-working' spaces.
